

# RUGER READYDOT™

FITS THE RUGER® MAX-9® PISTOL

The **Ruger® ReadyDot™** is an ultra-reliable 1X reflex sight designed specifically to co-witness with the Ruger® MAX-9® pistol, but the low profile sight fits any compact handgun with a standard Shield RMSc footprint. It is a fixed, non-adjustable sight with a large 15 MOA dot optimized for rapid target acquisition at pistol distances. The fixed co-witnessed dot avoids the necessity for delicate adjustment mechanisms making this one of the most rugged and reliable, waterproof and shock resistant pistol optics available.

## HOW TO USE THE READYDOT™ SIGHT

When using your **Ruger® ReadyDot™** sight, it is important to keep both eyes open. Look directly at the target and bring the pistol sights into your field of view. If you do not immediately see the red dot, use the iron sights to align the pistol and the dot will appear in the window.

The iron sights do not have to be aligned to use the red dot. The red dot will be aligned with the point of impact if it appears anywhere in the window.

## THE READYDOT™ SIGHT IS ALWAYS READY

The **Ruger® ReadyDot™** utilizes the light-gathering properties of fiber optics so it is self-adjusting for brightness and never needs a battery.

## READYDOT™ SIGHT SPECIFICATIONS

- **Light Source:** Light-gathering fiber optic (battery not required)
- **Brightness Adjustment:** Automatic based on ambient conditions
- **Aiming Dot:** Red 15 MOA dot
- **Magnification:** 1X (no magnification)
- **Lens:** 12mm Impact resistant optical grade polymer with multi-layer coating
- **Dimensions:** Sight only (Length x width x height) 1.6 x 0.9 x 0.9 inches
- **Weight:** 0.3 ounces
- **Footprint:** Fits pistols and mounting plates designed for Shield RMSc footprint
- **Parallax free distance:** 10 yds
- **Waterproof**
- **Also included:** 2 x M4 x 0.7 8mm screws, T10 torx wrench for mounting
